Case studies:

- OpenAI GPT,
- Google PaLM,
- Meta LLaMA

Introduction to Large Language Models:

- Large Language Models (LLMs) are AI systems that understand and generate human-like text
- They are trained on huge amounts of text data
- Used for chatbots, translation, coding help, content creation, etc.

Popular LLMs:

- OpenAI GPT
- Google PaLM
- Meta LLaMA

OpenAI GPT

- GPT = Generative Pre-trained Transformer
- Developed by OpenAI
- Powers ChatGPT

CASE STUDY

- ChatGPT used by students and professionals
- Helps answer questions, write code, and explain concepts
- Millions of users worldwide for learning and productivity

Real-World Example:

- A student asks ChatGPT to explain “Machine Learning”
- GPT gives a simple explanation with examples

Applications:

- Chatbots & virtual assistants
- Coding help (debugging, explanations)
- Content writing (emails, blogs)
- Education & online learning platforms

Google PaLM

- PaLM = Pathways Language Model
- Developed by Google
- Designed for reasoning and multilingual tasks

CASE STUDY

- Used in Google products like Bard (Gemini)
- Helps answer complex questions and solve math problems

Real-World Example:

- User asks Google AI to solve a math word problem
- PaLM understands the question and gives step-by-step solution

Applications:

- Search engines
- Question answering systems
- Language translation
- Research and data analysis

Meta LLaMA

- LLaMA = Large Language Model Meta AI
- Developed by Meta (Facebook)
- Open-source focused

CASE STUDY

- Used by researchers and developers
- Helps build custom AI chatbots and apps

Real-World Example:

- A startup uses LLaMA to build a customer support chatbot
- Runs locally with lower cost

Applications:

- Research projects
- Open-source AI development
- Chatbots for businesses
- AI experimentation in universities

THANK YOU!!
